

## **PC Architecture Ltd.**

### **Environmental Policy**

It is recognised that architects have an impact on the environment and have a responsibility to help end-users to a more sustainable consumption and enhancement of the natural environment.

PCA therefore aims to incorporate sound environmental practices where possible and benefit the end user.

It is the aim of PCA to be aware of the latest developments.

Inform clients of long term benefits

Consider guidance like the BRE Eco-homes Standards (Code for Sustainable Homes) where appropriate.

Share knowledge and experience with fellow consultants.

Consider the environmental impact of the construction process where appropriate in considering the selection of construction materials and to minimise waste.

Aim to keep up to date with current sustainable technologies and apply this within the constraints of the project.

Ensure contractors working in collaboration with us on the same project aspire to similar standards of environmental performance.

Manage the architect's office to reduce energy, waste and pollution.
